REFINING CONCEPTS    DEFINING SUCCESS

## FOOTWEAR PRODUCT REALIZATION SERVICE SHEET 3D CAD MODELING

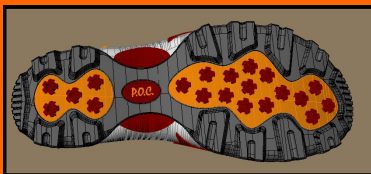

Proof of Concept offers 3D CAD MODELING as one of our key services. 3D CAD MODELING is a valuable tool in creating new footwear molded components. Footwear models are made in 1 to 1 scale inside the computer allowing for complicated assemblies and intricate details to be represented.

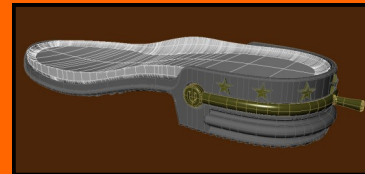

The process for creating 3D MODELS can start from a napkin sketch, clay model, or adobe illustrator file. Depending on the project needs, a 2D tech drawing can be produced for design communication and interaction. Also, colored renderings of the 3D model can be produced to use in presentations or on the Web.

3D CAD MODELS can be used for many downstream processes and/or applications such as:

Rapid Prototyping  
CNC Milling  
Manufacturing  
Virtual Samples
